

Securon design and manufacture replacement seat belts to meet the demands of a safety and cost conscious market. The range is manufactured, tested and approved to British and European standards.

Securon factories are equipped with up-to-date manufacturing and assembly processes with strict quality control procedures, approved to BS/EN1SO 9002.

We have access to the full SECURON range but have only listed popular types, please contact our sales office should you require any type not shown.

**Use this information to select the appropriate Seat Belt and remember:**

- Webbing should pass across bone structure i.e. the lap or centre of the shoulder.
- The buckle should lie just on or below the hip.
- There should be no slack in the webbing when the Seat Belt is worn.
- The Retractor should have approx. 30cm of webbing on the reel when the wearer is in the normal seating position - over long is less safe.
- Where the retractor has a pendulum (vehicle sensitive), the pendulum must hang down.
- These are complete seat belts - the supply of parts is not in accordance with seat belt regulations.
- Dimensions are approximate and are from centre of anchorage holes to mouths of buckles.

## Popular Seatbelts

*NB - Dimensions are approximate and are from the centre of anchorage holes to mouths of buckles.*
