Air System Protector

New air dryer cartridge with integrated coalescing* filter

Fine oil particles can contaminate components of the compressed air and brake system in commercial vehicles. Increased repair costs and vehicle downtime may follow. The new WABCO Air System Protector prevents these particles from entering the braking and compressed air systems. The air dryer cartridge with an integrated coalescing filter offers reliable and optimal system protection. The coalescing effect merges fine aerosols into compact droplets and facilitates optimised oil separation.

Take advantage of innovative WABCO technology. Optimise air dryer performance with the WABCO Air System Protector.*

- Reliable protection for commercial vehicle air and braking systems
- Replaces standard air dryer cartridges
- Extends system component life
- Reduces service costs and vehicle downtime
