

Subject :

BMAC 37X Round Series LED Rear Lighting

Date of Issue
01/03/2004

This range of lighting uses the very latest Red and Amber Precision Optical Performance Led's to achieve maximum life light output, performance and reliability.

Highly polished reflectors are used to achieve maximum light output.

Units are completely sealed using UV cured adhesives thus reducing the risk of water and dust ingress.

The reverse light uses high brightness LED's to achieve the required light output.

Reverse polarity protection is ensured by the use of blocking diodes.

Standard connection is via flying leads through a grommet entry in the rear housing.

Fixing centres have been designed to retrofit all units of 135-140mm diameter. They can be flanged mounted using the 2 off M6 female threaded inserts.

BMAC REF	PL REF	TYPE	REFLECTOR COLOUR	POSITION
370RR	PL13618	TAIL	RED	TAIL LIGHT IN LOWER HALF
