

Stud Cleaning Tool®

The Checkpoint Stud Cleaning Tool quickly and effectively removes rust, corrosion and dirt from wheel studs and hubs to help ensure a secure fitment of wheels and wheel nuts and minimise the risk of wheel detachment.

Application and Sizes: The tool is designed for use on a range of heavy goods and public service vehicles and has three stud brushes to fit sizes M18, M20 and M22 studs, as well as a hub cleaning attachment. The inserts are simply held in by three allen bolts which allows a quick and easy change between inserts.

How to use it: To use the tool simply attach the 1/2" drive supplied to the tool and a battery powered drill and push the cleaner onto the stud and drill forwards and then back until the stud is clean.

Material: The tool is manufactured from one piece of anodized aircraft aluminium, increasing the strength and durability of the tool itself.

“Caution: This kit should only be used by trained personnel following the above guidelines. Ensure gloves, eye protection and dust mask are worn whilst using this tool.”
