

DISC-LOCK™

The Disc-Lock Safety Wheel Nut is a free spinning wheel nut. It comprises of three pieces, each with interlocking cams which are joined together to form one assembly. When subjected to road shock and vibration the interlocking cams of the Disc-Lock Safety Wheel Nut rise against each other further locking the assembly, eliminating the possibility of the nut ever coming loose. The nut is installed in the same way as conventional nuts, using the recommended torque.

For removal the socket is placed over the hexagon nut and the hexagon flanged washer and then loosened.

Tested both on and off road the Disc-Lock Wheel Nut has been awarded the TUV certificate number 578703/01.

PART NUMBER	PL REF	DESCRIPTION
7/8" UNF X 14	PL08543	DISC-LOCK WHEEL NUT 7/8" UNF X 14
